TABLE OF CONTENTS

APPLICATION NOTES (delete prior to release):
This inspection system is based upon MIL-I-45208 and is subject to Customer evaluation and verification.[3.13]

The paragraph numbers in this quality manual do not correspond to the paragraph numbers in the MIL-I standard. This quality manual displays superscript numbers to establish the relationship between the standard and content in this quality manual. Superscript numbers correspond to paragraph numbers from MIL-I-45208A.

Paragraph numbers 1and 2 and 4 through 6 in MIL-I-45208A only provide guidance (except 2.1) and do not require reference in the quality manual.

1.0 SCOPE[3.1]

It is a policy of the Company to perform all activities in a manner that reflects a total commitment to quality. This means maintaining the highest standards of quality in all products and services and a dedication to the principle of maintaining the highest levels of quality and integrity in communicating with people inside and outside of the Company. It is also a policy of the Company to prevent production and distribution of products that would pose unreasonable risks to health, safety, or the environment. It is a goal of the Company to encourage all employees to strive for individual excellence in their work and in their association with other people inside and outside of the workplace. The Company strives to motivate employees to achieve this excellence by providing leadership, training, proper materials, facilities and a cooperative environment.

Managers are responsible for developing organizations and systems that accommodate the goal of achieving Customer satisfaction. Managers must recognize and support employees charged with the responsibility of interacting with Customers. Employees who are authorized to work with Customers are responsible for carefully listening and fully understanding their requirements and expectations. These employees should be as responsive as possible to those needs within the province and spirit of good business practices. Managers must monitor Customer satisfaction on a continuing basis, making appropriate adjustments and corrections if problems occur. This Quality Manual is produced to provide guidance to achieve the policies and goals of the Company. This manual of policies and procedures are subject to review by the Customer. The Company's Mission is to continually improve products and services.

2.0 ORGANIZATION

2.1 Quality Responsibility and Authority[3.2.3]

The quality manager has the responsibility and authority to resolve matters relative to quality in products, processes, and services from internal and external sources. Quality may suspend internal and external processes and services that do not meet requirements until appropriate corrective and preventive action is implemented on an expedited, high priority basis. In addition, Quality may withhold internal and external shipments of products that do not meet requirements until appropriate corrective and preventive action is implemented on an expedited, high priority basis. The quality manager reports directly to the President. Quality supervisors, inspectors, and auditors report directly to the quality manager.

2.1.1 Problem Resolution

Quality problems resulting from a variance to a program requirement are resolved by the organizational Group assigned the specific responsibility. Decisions affecting Quality, Cost, or Schedule are recorded using documented correspondence. Company correspondence is distributed and retained. Each organizational Group has the authority, responsibility, and freedom to initiate, recommend or provide solutions for programmatic problems; however, each Group is expected to fulfill this inspection system at all levels and protect the quality effort of other Groups upon which they have an influence.

2.2 Initial Quality Planning[3.11.1, 3.11.2]

The Quality Group is responsible for review of new and pending work based on the receipt of a Request for Proposal (RFP), the receipt of a new contract or potential contract or the activation

of a Company-funded program to integrate special or unusual contract requirements into quality plans and procedures.

2.3 Inspection and Testing Documentation[3.2.1]

2.3.1 Preparation

All work affecting quality is described by clear and complete documented instructions of a type appropriate to the circumstance. Preparation, maintenance, reviews and compliance with instructions is accomplished in 'real-time' or as a result of the initial quality planning function.

2.3.2 Inspection Instructions[3.9]

The Quality Group prepares an inspection instruction sheet for all inspection work by performing tasks that may include, but are not limited to:

- [redacted]
- Prepare Inspection Instruction Sheet, (IIS). The IIS may include, but is not limited to:

IIS#	Specification number(s) and revision letter(s)
Title of IIS	Mfg/QA Traveler/Planner# supported by the IIS
[redacted]	[redacted]

- [redacted]

After approval the IIS is released for use where specified. The IIS is exempt from issue control; however, [redacted]

2.4 Records[3.2.2]

2.4.1 General

Data to be recorded includes [redacted]

[redacted]

2.4.2 Record Verification

Records are examined for [redacted]

2.4.3 Record Maintenance

A Document Control Center can be used to maintain records as directed by the contract or for seven (7) years if not specified by the contract. To the extent practicable, records are [redacted]

2.4.4 Active Records

Records for active contracts are maintained in the quality area handling the inspection system. Records are removed [redacted]

2.4.4.1 Objective Evidence

Records are collected or produced to the extent necessary to [redacted].

2.5 Corrective Action[3.2.3]

2.5.1 Internal Corrective Action Requests

A Corrective Action Request (CAR) or a Request for Corrective Action (RFCA) is initiated as promptly as practicable to [redacted]

2.5.2 Corrective Action Implementation by the MRB

The MRB forwards the CAR or RFCA to [redacted]

2.5.2.1 Corrective Action Monitoring

An initial review of the adequacy of improvements and corrections and the monitoring of the effectiveness of actions taken are [redacted]

2.5.3 Supplier Corrective Action

A Supplier corrective action is initiated by the MRB, Purchasing Group or a Customer. A Corrective Action Request (CAR or RFCA) form is completed as specified by the Customer, the MRB or by the Quality Group. The CAR/RFCA form is [redacted]

Acceptable Supplier responses are forwarded to [redacted]

2.5.4 Customer Request for Corrective Action

A Customer request for corrective action may be communicated verbally or by letter or by formal corrective action request. These requests may [redacted]

2.5.4.1 Corrective Action Implementation

The Corrective Action Board (CAB), working with other Company organizations as needed, [redacted]

2.5.4.2 Corrective Action Progress

Progress of the corrective action is monitored by the Quality Group to [redacted]

3.0 FACILITIES AND STANDARDS

3.1 Drawings, Documentation and Changes[3.2.4]

The Quality Group verifies that the latest revisions of documents that are specified by contract are [redacted]

3.2 Change Control[3.2.4]

Changes to contractual requirements are documented using an Engineering Order, Request for Waiver / Deviation or an Engineering Change Proposals according to [redacted]

3.3 Measuring and Test Equipment[2.1, 3.3]

All measuring and test equipment instruments and devices used to determine a deliverable item's conformance to specified requirements are [redacted]

[redacted] Tools that are used for inspection purposes are calibrated prior to use. The environment where measuring and test equipment instruments and devices are both calibrated and used is controlled to the extent necessary to assure required accuracy, with consideration given to temperature, humidity, vibration, cleanliness and other controllable factors.

3.4 Use of Contractor's Inspection Equipment[3.3]

3.4.1 Availability

Company owned gauges, inspection devices and test equipment are made available for use by Customers when [redacted]

3.5 Control of Purchases[3.11, 3.11.1, 3.11.2, 3.11.3]

3.5.1 Procurement Document Requirements Review

The Quality Group reviews procurement documents to [redacted]

The Supplier is directed to provide some or all of the following:

- [redacted]
- [redacted]
- [redacted]
- [redacted]
- [redacted]

[redacted]

3.6 Materials and Material Control[3.9, 3.12]

3.6.1 Receiving Inspection

All materials are evaluated by receiving inspection to the extent necessary to [redacted]

[redacted]

Three levels of inspection sampling can be used: [redacted] *Sampling to permit defects is not permitted.*

When an item drawing is revised and/or when an item is purchased to a revision level that differs from parts in stores, the early revision parts [redacted]

Parts that have been sent out for special processing are [redacted]

The acceptable material from a lot subjected to 100% inspection may be released to production upon completion of appropriate documentation.

[redacted]

Receiving inspection personnel observe the following document order of precedence in the event of conflict, ambiguity or contradiction:

1. [redacted]
2. [redacted]
3. [redacted]
4. [redacted]
5. [redacted]

The Company's specifications do not take precedence [redacted]

3.6.2 Raw Material Inspection

The Purchasing Group specifies physical and/or chemical characteristics and properties on purchase orders for raw materials. The purchase order requires the Supplier to provide

[redacted]

When tests or analyses are complete the test report is returned to receiving inspection for compliance verification.

[redacted]

3.6.3 Control of Special Materials

[redacted]

3.7 Production Processing and Fabrication[3.2.1]

3.7.1 In-process Inspection

The Quality Group is responsible [redacted]

These inspections are performed as defined by [redacted]

3.7.2 Inspection Methods[3.4]

Inspection methods may include, but are not limited to: [redacted]

The inspection includes verification of compliance to:

- [redacted]

- [redacted]
- [redacted]
- [redacted]

When physical inspection of processed supplies is impossible or disadvantageous, indirect control of product quality is accomplished by [redacted]

3.7.2.1 Calculated Risk Release

In the event materials, components or assemblies are needed prior to receipt of Certified Test Data, Certificate of Compliance or Analysis, approved Request for Deviation or Waiver or other limited risk condition, cognizant MRB members of the Products and Quality Group may release the articles on a Calculated Risk. [redacted]

An open CRR prevents delivery of supplies unless waived by the Customer.

3.7.3 Identification[3.5]

Parts or assemblies found to be in compliance with inspection requirements are identified as [redacted]

3.7.4 Failure Reporting

A Material Report is initiated by process or inspection personnel for each failure detected, including those discovered during [redacted]

3.7.5 Tooling Inspection[3.3]

All production tools such as jigs, fixtures and templates used for producing deliverable supplies are [redacted]

3.8 Completed Item Inspection and Testing[3.2.1, 3.5]

3.8.1 Final Physical and Visual Inspection

All finished goods are inspected as specified on the applicable inspection instruction or Traveler or as specified by the Quality Group. Parts and assemblies are processed only after all operations specified on applicable process documentation are identified as complete and accepted. Inspections are made using [redacted]

[redacted]

3.8.2 Final Acceptance Testing

Supplies are approved for acceptance testing after a determination has been made that the supply is [redacted]

3.8.3 Final Acceptance Processing

After successful completion of final inspection and test, completed supplies are examined for the following:

- [redacted]

Documentation attesting to the acceptance of the supply is annotated upon completion of the final inspection and test.

3.9 Handling, Storage and Delivery

3.9.1 Protecting Product Quality

The Quality Group specifies, where required and according to contractual directives, instructions for [redacted]

The following routines apply:

- [redacted]

- [redacted]

3.10 Nonconforming Material[3.7]

3.10.1 Material Review Board

The primary responsibility of the Material Review Board is to [redacted]

3.10.2 Material Review Processing

- [redacted].
- [redacted]

3.11 Indication of Inspection Status[3.5]

3.11.1 Inspection Stamps

The Quality Group controls inspection stamps. The primary acceptance stamp is [redacted]

3.11.2 Identification Media

The inspection status of supplies is recorded on accompanying paperwork with a rubber stamp and in some instances with notations and signatures. Rubber stamps are of a design distinctly different from Government inspection stamps. The inspector completes a Good Material Tag, following its format, upon completion of final inspection when specified by the Inspection Instruction. When a condition exists that requires temporary suspension of inspection or processing activities, the inspector completes [redacted]

3.12 Government Inspection at Subcontractor or Vendor Facilities[3.8, 3.11, 3.11.1, 3.11.2]

When the Customer wishes to conduct Source Inspections at Supplier facilities, the following statement is normally included in the Customer's purchase agreement: [redacted]

[redacted]

When the Customer contract is accepted, the Source Inspection statement is [redacted]

3.13 Government Property[3.6]

Government and Customer property is controlled according to contractual requirements and applicable property and/or facility agreements, including, but not limited to:

- [redacted]
- [redacted]
- [redacted]
- [redacted]
- [redacted]
- [redacted]
- [redacted]

3.13.1 Bailed Property

Bailed property is controlled according to contractual requirements and applicable property and/or facility agreements.

TABLE OF CONTENTS

1.0 PURPOSE

To prescribe the minimum procedures for the control of Customer Property according to the regulations outlined in the Federal Acquisition Regulation, Part 45.

2.0 SCOPE

This procedure shall cover all property furnished to or acquired for use on contracts.

a. Property Administrator means the individual duly designed by appropriate authority to administer the contract requirements and obligations relative to property. The person is an authorized representative of the Contracting Officer.
b. Property means all property owned by or leased or acquired by the Customer under the terms of a contract. Property and contractor acquired property is defined as:

1. Property in the possession of or acquired directly by the Customer and subsequently delivered or otherwise made available to the contractor.
2. Contractor acquired property is property procured or otherwise provided by the contractor for the performance of a contract, title to which is vested in the Customer.

c. Customer material is property that may be incorporated into or attached to an end item to be delivered under a contract or which may be consumed in the performance of a contract. It includes, but is not limited to, raw and processed material, parts, components, assemblies and small tools and supplies.
d. Special Tooling means all dies, jigs, fixtures, molds, patterns, taps, gauges, other equipment and manufacturing aids and replacements thereof, acquired or manufactured by the contractor for use in the performance of a contract, which are of such specialized nature that, without substantial modification or alteration, their use is limited to the development or production of particular services (does not include consumable property, special test equipment or buildings, non-serviceable structures, general or special machine tools or similar capital items).
e. Plant Equipment means personal property of a capital nature (equipment, vehicles, machine tools, test equipment, furniture and accessory and auxiliary items, excluding Special Tools and Special Test Equipment) used or capable of use in the manufacture of supplies or in the performance of services or for any administrative or general plant purpose.
f. Scrap means property that has no reasonable prospect of being sold except for recovering value of its basic material content.
g. Salvage means property recoverable for further use which because of its worn, damaged or deteriorated, incomplete condition or specialized nature, has no reasonable prospect of sale or use as serviceable property without major repairs or alterations, but which has some value in excess of scrap.
h. Custodial Records means written memoranda or identifying method of any description or the type used to control items issued from Tool Cribs, Tool Rooms, Stockrooms, etc., such as requisitions, issue hand receipts, took checks, stock record cards or books and the like.

i. Individual Item Record means a separate card, form or document, used to account for one item of property.

j. Stock Record means a perpetual inventory form for recording quantities and types of items received, in stock and issued to requesters against a specific contract. The form serves as a posting reference and records the balance of stock items on hand and their unit prices.

k. Discrepancies Incident to Shipment means all deficiencies incident to the shipment of Customer property to or from a contractor or vendor's facility, Customer depot or like source wherein differences exist between the property said to have been shipped and the property actually received are identified as discrepancies incident to shipment. These deficiencies include, but are not limited to, loss, damage, destruction, improper status and condition coding, error in documentation, i.e., identity or classification and improper status and consignment or unit not furnished.

l. Work-in-Process is the definition used for the purpose of financial reporting and covers material which has been released to the production element.

m. CPFF Material, Contractor procured CPFF material is property purchased by the contractor, acting as agent for the Customer, for use in connection with a specific cost-plus type contract. This material becomes Customer property upon receipt and acceptance by the contractor.

n. Bonded Storage means a secure storage area with access limited to designated personnel.

3.0 RECEIVING

Receiving Inspection shall inspect all Customer furnished property upon receipt to verify [redacted]

3.1 If overages, shortages or damaged conditions are noted upon receipt of property acquired for the Customer account (under a CPFF contract), the Company shall [redacted].

3.2 Upon receipt of Customer furnished property or property acquired by the Company for the account of the Customer the receiving function shall [redacted]

3.3 Shipping containers that pack Customer property that are of a reusable nature shall [redacted]

4.0 CUSTOMER PROPERTY RECORDS

Upon receipt of Customer owned property and/or material, the Company Property Administrator shall establish individual item records or stock record cards as necessary according to the provisions of FAR-[redacted]. In the case of material items, stock record cards shall be prepared and shall contain the following information:

a. [redacted]
b. [redacted])
c. [redacted]
d. [redacted]
e. [redacted]
f. [redacted]
g. [redacted]
h. [redacted]
i. [redacted]

4.1 Records of Misdirected Shipments

Misdirected shipments shall be reported to the Customer Property Administrator immediately. Records shall be maintained to provide the following information:

a. [redacted]
b. [redacted]
c. [redacted]
d. [redacted]
e. [redacted]

The Company shall forward this information in writing to the Customer Property Administrator within [redacted].

4.2 Documentation

Documentation supporting all entries to the Customer Property Records shall be maintained by the Company Property Administrator (i.e., receiving documents, issue documents, disposition documents, etc.)

4.3 Postings to Property Records

All property record postings shall [redacted]

5.0 MATERIAL REQUISITION/ISSUE

After receipt of Customer furnished material and preparation by the Company Property Administrator of the required stock record cards the material shall be [redacted].

5.1 Sensitive material issued according to 5.0 shall be maintained in a secure area with access limited to authorized personnel.

6.0 UTILIZATION

It is the responsibility of the Company Property Administrator to assure [redacted]

7.0 MAINTENANCE

The Company Property Administrator shall insure [redacted]

8.0 PHYSICAL INVENTORIES

Inventory, as used in this procedure, consists of sighting, tagging or marking (when considered necessary), describing, recording and reporting the property concerned and reconciling the property recorded and reported with the property records.

The personnel who perform the physical inventory shall not be the same individuals who maintain the property records or have custody of the property. [redacted]

[redacted]

8.1 The Company shall investigate and report to the Customer Property Administrator (CPA) all cases of loss, damage or destruction of Customer Property, either in raw material or completed/[redacted]

The report shall contain at a minimum:

A. [redacted]
B. [redacted]
C. [redacted]
D. [redacted]
E. [redacted]
F. [redacted]
G. [redacted]
H. [redacted]
I. [redacted]

9.0 DISPOSITION

At the completion of a contract under which Customer property was furnished, the Company shall perform an inventory to determine if any residual items of Customer property or scrap are remaining. If residual items or scrap remain, the Property Administrator shall list such items on [redacted]

10.0 SUBCONTRACT CONTROL

The Company purchasing function shall insure that the following statement is included in all subcontracts or vendor purchase orders where Customer furnished material or property is furnished to the subcontractor or vendor:

Responsibility for Property [redacted]

[redacted]

Unless relieved by the Contracting Officer with respect to Customer property as herein provided, Seller shall [redacted]

10.1 The provisions of paragraph 8.1 apply to subcontractors possessing or controlling Customer property accountable under the contract.

11.0 REPORTS

Reports shall be prepared by the Property Administrator according to the terms of individual Customer contracts.

12.0 PRECIOUS METALS, [redacted]

12.1 Immediately upon receipt Receiving Inspection (R&I) shall inspect material according to para. 3 - 3.2.

12.1.1 Sensitive material shall be stored in bonded storage immediately upon acceptance or rejection by R & I.

12.2 The Company's Property Administrator, upon taking possession of accepted sensitive material, shall [redacted]

12.2.1 The Company Property Administrator shall [redacted].

12.2.2 Property records shall exhibit [redacted].

12.3 The Property Administrator shall issue [redacted]

12.4 All other conditions of this procedure shall be complied with as required.

12.5 The Property Administrator shall notify the Customer Property Administrator by [redacted]

13.0 REQUESTING AND/OR ACQUIRING CUSTOMER FURNISHED PROPERTY

A. [redacted]

B. [redacted]

14.0 HAZARDOUS WASTE MANAGEMENT

Property received from or acquired for Customer that contains material of a hazardous nature shall be identified with its chemical formula and proper name according to paragraph 3.2.

14.1 [redacted]

14.2 [redacted]

14.2.1 The instructions shall contain [redacted].

14.2.1.1 Storage and handling instructions may be in the form of [redacted].

14.3 Scrap or Salvage materials shall be dispositioned by the Customer Property Administrator according to paragraph 9.

15.0 WORKMANSHIP

Adherence to applicable federal, state, local and environmental, health and safety requirements is mandatory.

TABLE OF CONTENTS

1.0 Scope

These procedures comply with the requirements of [redacted] Measuring instruments are calibrated, at a temperature of [redacted] and [redacted] relative humidity, in the [redacted] For cases where calibration must be conducted in the production area, stabilization time is also allowed.

2.0 Definitions

a) Gages are precision devices that compare the characteristics of an item to specified requirements.

b) Recall - All gages require recertification at established intervals. Recall dates are identified by a month/year designation. Certification is performed no later than the last day of the month/year designation except as otherwise provided. All gages may be used for acceptance/rejection of product during the month/year recall interval.

c) M&TE - Measurement and test equipment

d) Standards - Accepted values of natural physical constants or values traceable to National or International Standards.

e) Procurement of Gages - Gages are procured from a qualified source and are inspected by Gage Inspection before use. A newly acquired measuring or test device that has been certified as calibrated, and whose certification indicates an NIST reference number, may be issued to the user activity after a calibration interval and records have been established.

f) Special Equipment - (Your Co) standards, instruments, chemicals, and tools for which a measurement standard is not available on-site to perform calibrations.

g) Significantly out-of-tolerance - An instrument's accuracy that exceeds the manufacturer's published limits.

h) Adequacy - Adequacy, range, resolution and stability of M&TE and standards is determined by quality characteristic measurement requirements on an individual basis.

I) Accuracy Ratio - 10:1 for linear, weight, current, and voltage transfer standards.

3.0 Procedures

3.1 Identification

When a gage does not provide its own serial number then a number is issued. The numbers run consecutively for each gage size and may be further identified under a type-coding system. This number is etched or otherwise imprinted upon the gage.

3.2 Storage of Gages

All company owned gages are kept clean and are stored in cabinets and bins in the inspection department, tool crib or other storage areas when not in use.

3.3 Recall

A rotating card file system is maintained on all instruments. The form used is QC-116-1. The rotating card file provides the means for implementation of recall for any gage that has expired its certification period. [redacted]

Portable gages are physically removed from service and recertified during the recall interval as time permits. Permanent gages are [redacted]

3.4 Working Record

In addition to the card file system, a working record sheet, QC-116-4, is kept on each company-owned gage/standard. The purpose of this record is to [redacted]

3.5 Calibration Frequency

Calibration intervals are based on the following criteria: [redacted].

Calibration intervals are established in terms of [redacted] and the schedule of Table I.

Tools that are identified as "Spares" in the calibration database are calibrated based upon usage rather than time and a usage tag is exhibited on the tool or its case. A "Spare" tool is calibrated after it [redacted]

[redacted]

TABLE I, Calibration Intervals

Calibration Cycle	Recalibration Cycles to Qualify for New Calibration Cycle	New Calibration Cycle
Annual	[redacted]	[redacted]
Bi-Annual	[redacted]	[redacted]
3 - 4 Years	[redacted]	[redacted]
5 Years	N/A	[redacted]

3.6 Interval Adjustment

M&TE whose calibration error is recorded as being greater than the last recorded calibration error, but not significantly out of tolerance, reverts to [redacted]

3.7 Interval Extension / Adjustment

M&TE calibration intervals may be extended or adjusted by [redacted]

3.8 Calibration Overdue

Overdue items are prevented from use as practicable. A calibration overdue notice in the form of an inter-office memo or other format may be used to facilitate recall of portable gages.

3.9 Calibration Identification

A calibration tag, QC-116-2, showing [redacted] is attached to each item of M&TE and/or manufacturing tool, gage, jig or fixture used for measurement acceptance of quality characteristics. The tag serves as [redacted]

[redacted]

3.10 Calibration Standards/Special Equipment

It is the position of the National Conference of Standards Laboratories (NCSL) that:
"Test report numbers issued by the NIST are intended to be used solely for administrative purposes. Although they are often used to uniquely identify documents which bear evidence of traceability, test report numbers should not be used nor be required as proof of adequacy or traceability of test or measurement."

Calibration of special equipment is conducted by [redacted].

When calibrations are made for special equipment the purchase order specifies, [redacted] and also require the lab to submit a report which contains:

1. [redacted]
2. [redacted]
3. [redacted]).
4. [redacted]
5. [redacted]
6. [redacted]
7. [redacted]

3.11 Recall

A rotating card file system is maintained on all (Your Co) Transfer Standards indicating the [redacted]

3.12 Standards Control

A current list of all calibration standards used by the calibration section is maintained and treated as [redacted]

3.13 Customer Furnished Tooling

The Metrology department places all Customer furnished inspection gages on the calibration system. Records are kept showing [redacted]

3.14 Out-of-Tolerance Equipment and Tooling

Equipment and tooling found to be significantly out of tolerance, damaged, inoperative, erratic or exhibiting some other form of anomalous condition should be [redacted]

M&TE found significantly out of tolerance at recalibration for [redacted] is prevented from use (except as otherwise provided) by [redacted] All out of tolerance data is utilized in an evaluation to determine the adequacy of the M&TE for the intended use and to determine the effectiveness of the calibration procedure and measuring or test procedure. A notice is prepared and [redacted]

3.15 Provision for Use of Out-of-Tolerance Equipment (apply sparingly)

An instrument whose calibration error is significantly out-of-tolerance (over a short portion of a specified range) is returned to service only when [redacted]

3.16 Suspected Product Nonconformance

Any product certified with M&TE subsequently found to be out-of-tolerance is immediately reported to the Customer. "The impact on quality of products examined or tested by equipment found to be out-of-tolerance during calibration will [redacted]

[redacted]

3.17 Traceability

Inspection instruction sheets and manufacturing travelers specify measurement and test equipment utilized for product conformance inspection. The M&TE number is recorded on [redacted]

3.18 Production Tooling Used as Media of Inspection

Any production tooling which is used to accept attributes of a part, sub-assembly or assembly is verified for accuracy prior to its use and [redacted]

3.19 Employee Owned Tools

Personal Tooling or gages owned as personal property by employees of (Your Co) are [redacted]

3.20 Subcontractor Calibration

The quality requirements outlined in Supplier Quality Requirements QC-117 are imposed to the level required by the (Your Co) Quality Group. Criteria for the selection of the inspection level are based on [redacted].

3.21 Storage and Handling of M&TE

M&TE is handled during movement using the manufacturers recommendations or handling practices that prevent exposure to [redacted] - except that which is normally encountered during movement -- and [redacted].

M&TE requiring transportation to a calibration laboratory is packaged to [redacted]

3.21.1 Calibration Prior to Archive / Long-Term Storage

An instrument does not require accuracy verification prior to archive / long-term storage if it was [redacted]

3.22 Setting / Selecting a Reference Standard

Rule: The measurement range of a device being checked for accuracy must be less than [redacted] the maximum measurement range of the reference standard – see the following examples.

[redacted]

VOLTMETER:
A voltmeter that is required to be calibrated shall be verified for accuracy within an equivalent range on the reference standard, e.g.,

The voltmeter reference standard has scales that range from 2-20V, 20-200V, etc. – the voltmeter being checked for accuracy must be set to the same range as the reference standard – the reference standard must be set to a range that brackets the same range as the voltmeter being checked for accuracy, i.e., if the voltmeter being checked is set to 2-20V then the standard must be set to the same range – do not use the 20-200V range on the standard to check the 2-20V range on the voltmeter being checked for accuracy.

CURRENT SHUNT:
The measurement range of a reference standard shunt must not be greater than [redacted] the measurement range of the shunt being checked for accuracy, e.g., a 100A current shunt reference standard can be used to calibrate a [redacted] but the same standard cannot be used to calibrate a [redacted]

OTHER MEASUREMENT DEVICES:
Any reference standard whose maximum measurement range is the same as the device being checked for accuracy must be at least [redacted] more accurate than the device being checked, e.g., a device being checked has a 1% tolerance then the reference standard must [redacted]

[redacted]

Supplier Quality Requirements

☐PURPOSE and SCOPE

To establish the minimum requirements for supplier Quality Systems necessary to ensure that materials, parts, components, and services meet the requirements of the Contract. Procedures used to implement the provisions of this requirement shall be subject to (Your Co) approval upon request.

☐APPLICABILITY

These requirements shall apply to all supplies and services when referenced on the Purchase Order and amendments thereto.
When (Your Co)'s Purchase Order includes Seller's Inspection System QC-117 Level I, as a requirement, Seller's contractual commitment for an Inspection System shall be defined by all paragraphs of this specification.
When (Your Co)'s Purchase Order indicates Level II as a requirement then the Seller's contractual commitment for an Inspection System shall be defined only by those paragraphs of this specification which are checked-off.

☐DEFINITIONS and ABBREVIATIONS

A. The term 'Buyer' or '(Your Co)' means (Your Co).
B. The term 'Seller' means the legal entity that is the contracting party with the Buyer with respect to the Purchase Order.
C. 'IAW' means in accordance with.
D. 'MRB' means Material Review Board

☐SELLER's QUALITY SYSTEM, GENERAL

The Seller shall maintain an effective Quality System planned and developed in conjunction with his other functions to comply with contractual requirements. In order that the Quality System will be effective, it shall provide

[redacted]

.
Records shall be kept available for [redacted]

☐NEGOTIATIONS

It is not the intent of this specification to restrict the Seller in his mode of operation; therefore, it is possible that certain items herein may be subject to negotiation. Until such time as the subject of the negotiation is resolved, the Seller is [redacted]

[redacted]

☐PROPRIETARY INFORMATION

The Seller must identify in writing the intended use in performance of the Purchase Order of an item, material, component or process with respect to which access by (Your Co) or (Your Co) Customer representatives for purpose of Quality Assurance by inspection, test or process surveillance is proposed to be restricted. [redacted]

The absence of such written identification is a representation by Seller that [redacted]

☐PROCESS CONTROL

The Seller shall provide for complete review of contract requirements at the earliest practical phase of contract performance to [redacted]

The Seller shall develop an Inspection/Test Plan specific in nature and related directly to the hardware produced.
The Plan shall [redacted]

[redacted]

☐SUBCONTRACTOR CONTROL

The Seller shall be responsible for adequate and effective control over his procurement sources to ensure that [redacted]

☐DRAWING and CHANGE CONTROL

The Seller shall have a procedure and designate a responsible department for the distribution of all current specifications and drawings to the required Production and Inspection areas.
The procedure shall also provide [redacted]

☐RECEIVING INSPECTION

The Seller shall inspect incoming material to assure that purchased raw materials, parts, assemblies, components, tests, processes, hardware, etc. conform to drawings, Purchase Order, and specification requirements. When it is not practicable or feasible to assure quality upon receipt, the Seller shall make provision for [redacted]

[redacted]

☐STOCK CONTROL

The Seller shall provide for protection and control of supplies and materials stored for use in deliverable (Your Co) products.
Control shall cover such items as [redacted]

☐SAMPLING INSPECTION

Acceptance sampling procedures, if other than ANSI Z 1.4, must have (Your Co) approval prior to use; sampling to permit defects is not allowed.

☐TOOL, GAGE, and TEST EQUIPMENT

The Seller shall be responsible for providing and ascertaining the accuracy and stability of tools, gages, and test equipment to assure supplies conform to contractual requirements.
[redacted]

☐MATERIAL CONTROL

Nonconforming material shall [redacted]

The Seller shall maintain traceability of raw material used in the manufacture of deliverable products. A correlation shall be made between the data derived from test, inspection, and processing for each item produced and each lot of raw material, and delivered to (Your Co) with each shipment.
The Seller shall maintain controls to assure accomplishment of [redacted]
(Your Co), the Seller will obtain authorization and instruction from (Your Co) Purchasing prior to returning products, and shall [redacted].

☐TECHNICAL REQUIREMENTS

Unless otherwise specified, (Your Co) is responsible for compliance to reliability, safety, weight, or other special requirement, unusual test or inspection procedures or equipment, and any special revision or model identification.

OPER	DEPT	Description of Task	SIGN	MR – ECP - ACN	Date	Gage
PART I (Sample Content – replace content as required)						
5	QC	Review analysis: XX%±X% max IAW Your #. Forward copy of test data to Logbook. Record lot# (provides traceability)				
10	TECH	Attach test apparatus (gauges prepared IAW Your #). Provide QC with sample. Lot#: _____				
20	TECH	Verify cleanliness of items and fixtures.				
21	**QC**	**Request Customer Source.**				
23	**CUST**	**Perform Monitoring.**				
25	PROD or QC	Perform a test IAW Your #. Any indication requires repeating Op 20 above and allowing the item to stand for 24 hours minimum. Repeat the test; a 2nd indication is cause for reject. Record accurate observations on this traveler.				
30	TECH	Install items into fixtures IAW Your #. Perform test of items IAW Your #. Rework apparatus IAW Your # A/R & record accurate disposition on Your # or this traveler.				
35	QC	Verify data Your # IAW Your #. Verify weight and spread from nominal value provided by engineering is ±X% Attach data to traveler.				
PART II						
40	TECH	Prepare items for testing IAW Your #. Verify traceability of each item to data acquisition channel, test equipment is within calibration cycle, & unused test leads are insulated IAW Your #.				
50	TECH	Perform test cycles 1-5 IAW Your # & spec. Verify items meet all requirements. Forward completed data to QC.				
55	QC	Perform data review on cycles 1-5 as received from test lab IAW Your # & Inspection Instruction Sheet QC-311.				
57	QC	Verify test procedure approvals are received from Customer prior to ATP when required by contract - consult QAM (QA Mgr).				
60	TECH	Prepare assemblies IAW Your #.				
62	ENG &TECH	Perform calculations & connect assembly IAW Your #.				
70	TECH	Perform Test IAW Your # and Bulletin from Engineering.				
75	QC	Review data for compliance IAW Your # and Bulletin.				
80	TECH	Perform cycles (1-3) IAW Your #.				
85	QC	Review data from cycles (1-3) IAW Your #.				
90	TECH	Perform test IAW Your #.				
95	QC	Review data IAW Your #.				
100	TECH	Rework cell(s) with out of spec condition IAW Your # & record accurate disposition on this traveler.				
105	QC	Disposition rework IAW Your # A/R. Attach copy of analysis to traveler. Verify rework observations are accurately recorded.				
110	TECH	Prepare items IAW Your #. Rework items IAW Your # A/R & record accurate disposition on this traveler.

185	QC	Verify test IAW Your #.				
190	TECH	Perform test IAW Your #.				
195	QC	Verify compliance to Op 190 and compliance to Notes supplied with Your # when specified by contract - consult QAM.				
197	**QC**	**Request Source Inspection for ATP data review A/R.**				
199	**CUST**	**Perform Source Inspection for ATP data IAW contract requirements.**				
		PART IV				
201	QC	Verify tests have been completed prior to next Op. If not completed, notify Engineering for info only.				
203	QC	Test cells IAW **Op 25** & record results on Your #.				
205	**QC**	**Request Customer Source for Monitoring.**				
207	**CUST**	**Perform Source Inspections IAW Contract directives.**				
220	TECH	Weld IAW Your #. Rework A/R IAW Your # & record accurate disposition on this traveler.				
225	QC	Inspect weld IAW Your #. Test weld IAW **Op 25**; record results on Your #. Verify rework was performed IAW Your # & disposition was accurately recorded on this traveler.				

COMMENTS:

OPER	DEPT	Description of Task	SIGN	MR – ECP - ACN	Date	Gage
230	TECH	If radiographs were not produced prior to Op Your # then radiograph each item now if required by contract - consult QAM.				
235	QC	Perform dimensional inspection IAW Your # & drawing ( ). Record dimensions on Your #.				
237	LAB	Examine post-ATP radiographs IAW Your #unless Level II certification is required by contract; forward radiographs to Supplier A/R for certified exam.				
247	QC	Perform final test on items IAW **Op 25**, Your #**,** & record results on Your #.				
250	PROD	Clean items IAW Your # (provide QC with first article for marking).				
255	QC	Perform final visual inspection IAW Your #.				
260	PROD	Prepare items & package IAW Your # & contract unique PPP&M instructions. **A removable special handling tag may be required for each unit pack - consult QAM.**				
265	QC	Verify preparation & packaging IAW Your # & PPP&M instructions. Verify bags are not torn or damaged at packaging.				
267	QC	Prepare & review final data package: **(Blank lines are N/G on forms)** 1. Cert. of Compliance & Cert. of Authenticity. 2. Pre-ATP & ATP test data sheets. 3. Item weights. 4. Flowcharts from all tests 5. End Item Data Package IAW Customer Format - consult QAM 6. Verify each page of the EIDP specifies the CEI name, P/N & Revision (and S/N listing when appropriate) 7. EIDP Summary IAW Customer Format - consult QAM 8. Produce deliverable data package and shipping list IAW Customer Format -- consult QAM Ensure Open Actions have been resolved prior to final acceptance.				
271	QC	Complete Your # and deliver with end item data package. Produce traceability logbook for all materials, components, and sub-assemblies. Provide copy of traceability logbook for the final logbook.				
273	**QC**	**Request Customer Source Inspection for FINAL ACCEPTANCE.**				
275	**CUST**	**Perform Source Inspection IAW contract requirements. Acceptance is defined as approval of the end item data package and the contract end items.**				
280	PROD	Pack items and 2 data packages, & mark carton & crate IAW Your # & contract unique PPP&M instructions.				
285	QC	Verify packing & examine all cartons & crates for marking IAW Your # & PPP&M instructions. Verify 2 copies of the data package are in the cartons. Determine need for crate handling procedure inclusion with P/S. Items must be maintained at 32° to 68°F if items are stored in excess of one week. If items are to be stored more than 2 weeks they are to be maintained at 32° to 40°F - **consult QAM.**				
295	QC	Prepare and store data for 20 years -- contact DCC for assistance.

Abstract:
This document describes general manufacturing and interpretation requirements.

REVISION LOG

Issue	Date	Comment	Author
0-0			

DOCUMENT CHANGE RECORD

Issue	Item	Reason for Change

TABLE OF CONTENTS

1. SCOPE

This document describes general requirements and methods of interpreting engineering requirements specified in specifications and/or drawings.

2. THEORY

The space available on product drawings sometimes limits the opportunity for a clear description of engineering requirements. Details that the engineer would like to include on the drawing are sometimes left off with the assumption that the User will understand what is meant within the notation(s). These assumptions are valid only when the User is the engineer; otherwise, concise training of personnel is required.

3. REFERENCES

ANSI B46.1, Surface Roughness
ASME B1.1, Unified Inch Screw Threads
ASME B18.2.2, Square and Hex Nuts
ASTM E 29, Significant Digits
FED-STD-H28, Screw Thread Standards for Federal Services

4. REQUIREMENTS

4.1 Order of Precedence

In the event of conflicting requirements the following order of precedence governs:
The Customer's requirements always supersede Company requirements unless approved by the CCB.

- [redacted]
- Company Drawing(s)
- [redacted]
- Military or Society Procedures or Standards

4.2 Significant Digits

Calculations may be performed with a greater number of significant digits than shown on the applicable drawing; however, measurements and calculations must be *reported* to the same number of significant figures as specified by the applicable drawing. For instance, [redacted]

[redacted] however, the drawing specification requires reporting the calculated value to no more significant digits than shown.

4.3 Determining Conformance; Absolute Method or Rounding Method (ASTM E 29)

Unless otherwise specified by the CCB, the 'rounding method' is used for determining compliance of test data to product specifications according to ASTM E 29:
(some contracts specify "NO ROUNDING — TOLERANCES ARE ABSOLUTE")
Rounding is performed as follows: [quoted from ASTM E 29]

- [redacted]

Example — 0.021"±0.001"
0.0211" to 0.0214" *must* be rounded down to [redacted] for **2** significant digit specifications;
0.0215" to 0.0219" *must* be rounded up to [redacted] for **2** significant digit specifications;
(unless the last retained digit from the rounding method is even, e.g., 0.0225" is rounded down to 0.022" since the last digit retained is even, while 0.0226" is rounded up to [redacted])
Example — 0.0215"±0.0015"
0.0211" to 0.0219" must be applied as observed - no rounding is possible if the measurement equipment can only read to the 4th decimal place. If the equipment is capable of reading beyond the 4th decimal place then round to the last digit retained as described herein paying particular attention to whether the retained digit is odd or even when followed by the numeral 5.
Example — 550±50
499.1 to 499.4 *must* be rounded down to [redacted]
499.5 to 499.9 *must* be rounded up to [redacted]
600.1 to 600.5 *must* be rounded down to [redacted]
600.6 to 600.9 *must* be rounded up to [redacted]

4.3.1 Equipment Tolerance

0.0211" or 0.0214" **must** be rounded down to [redacted] for **2** significant digit specifications; however, for **3** significant digit specifications, where instrument accuracy is specified as ±0.0001", the original measurement figure of 0.0211" may actually be 0.0210" or 0.0212".

The instrument tolerance **can** be used to affect 'rounding' by an amount equal to the plus *or* minus accuracy stated by the instrument's calibration tag or record.

[redacted]

4.4 Target, Goal and Should-Be Specification

Target, Goal and Should-Be specifications are suggested specifications, they are not fixed and compliance is more a judgment than a rule.

4.4.1 Application of the Drawing or Procedure Specification

Monitor data for compliance to the target value. When the product or process does not match the target value specified by the product drawing or process procedure, [redacted]

4.4.2 Target and Range Specification

When Range values are specified in addition to a Target value then product compliance to the Range values is [redacted]

[redacted]

4.5 Potting and Encapsulation

4.5.1 Engineering Drawing Note(s)

Potting and encapsulation operations may or may not be defined by a drawing note that references a manufacturing procedure that defines the lot formation and use of an epoxy log book for every mix.

4.5.1.1 Application of Drawing Specification

Unless otherwise specified, potting and encapsulation materials whose shelf-life has expired must not be used on deliverable products unless authorized in writing by the MRB or CCB.

All potting and encapsulation materials are identified with a shelf-life expiration date.

The expiration date is sometimes modified by an annotation that applies an additional expiration date after the container is opened, e.g., 6 month shelf-life while un-opened and properly stored and then a 3 month shelf-life after opening the container. Prior to using any potting or encapsulation material, determine its shelf-life expiration date by [redacted]

4.6 Dimensional Requirements and Allowances

4.6.1 Surface Flaws

Surface flaws include [redacted] Acceptance of parts having surface flaws shall be at the discretion of the REA and shall be based upon the function of the part.

4.6.2 Free State Variation

If material flexibility or normal stresses can be expected to cause parts to be out of tolerance, appropriate inspection procedures shall be obtained from the REA prior to inspection of parts.

4.6.3 Blind Holes

The drill point shall [redacted]

4.6.4 Gaging Hole Diameters

The diameter of a hole is within required limits when accepted by “GO” and “NOT GO” plug gages of appropriate size without reasonable evidence during plug gaging that the hole is out-

of-round in excess of the diameter limits. Bell-mouthed holes are [redacted]

4.6.5 Hole Quality

The walls of holes shall be clean cut and shall present a uniform machined surface.
Hole edges shall be free from burrs and shall not [redacted]
These requirements are subject to visual inspection only and are to be evaluated in terms that are [redacted]

4.6.6 Removing Burrs and Sharp Edges

All burrs and sharp edges shall be removed to the extent that material fragments are not visible and sharpness cannot be felt by using either a chamfer or radius. If it is necessary to break sharp edges or to deburr after application of chemical surface treatment, the bared metal shall be touched-up according to section herein named "Correcting Defects in Coating". Flash on molded plastic parts that does not cause the part to exceed maximum dimensional limits need not be removed. These requirements do not apply to rough and semi-finished [redacted]

4.6.7 Correction of Manufacturing Defects

4.6.7.1 Permissible Corrections

Correction is permissible if [redacted]

4.6.7.2 Non-permissible Corrections

Corrective methods that add material to the product or that employ techniques abnormal to the production process are [redacted]

4.6.8 Correcting Defects in Coating

Defects in chemical organic and metallic coatings may be corrected by [redacted]

[redacted]

4.6.9 Flat Surfaces

Where no parallelism tolerance is specified, flat surfaces of a part shown as parallel on a drawing shall be parallel within their limits of size. Flat surfaces of a part shown as perpendicular on a drawing shall be perpendicular within [redacted]

4.6.10 Thread Form

All threads shall be free from [redacted] Where no thread form is specified, threads shall comply with [redacted].

Cold forming thread tools such as Besly "X-Press" may be used in lieu of metal cutting tools.

A slight groove may appear along the thread crest as a result of the metal flowing action of a Besly tool and is acceptable if the overall thread crest height conforms to limits specified by [redacted] and applicable specification sheet.

4.6.11 Thread Gaging

Thread wires and measurement indicators may be used to accept thread dimensions.

When "GO" gages are used, the product shall allow the "GO" gage to enter or to be entered the specified full length or depth of the thread; however, the thread must be functional.

When "NOT GO" plug or ring gages are used, the product is acceptable when it does not enter the gage or there is [redacted]

[redacted]

4.6.12 Surface Roughness

When the surface roughness specified is less than 32 microinches, measurement shall be performed according to [redacted] When the surface roughness specified is 32 microinches or greater, visual and tactile comparison of the actual part surface with commercial roughness comparison specimens is acceptable in lieu of [redacted]

4.7 Requirements for Cleaning, Protection and Identification of Raw Material, Parts and Assemblies

4.7.1 Protection

All parts and assemblies shall be adequately protected from accumulation of foreign matter, corrosion, physical damage or deterioration. These requirements shall apply to [redacted]

4.7.2 Cleanup of Parts and Assemblies

All finished parts and subassemblies shall be adequately cleaned before final assembly. Final assembly and necessary subassembly shall be performed in an environment appropriate to the type of product. All parts and assemblies shall be thoroughly cleaned to remove foreign and manufacturing waste material such as:

- [redacted]

DOCUMENT CHANGE RECORD

Issue	Item	Reason for Change

TABLE OF CONTENTS

1.0 PURPOSE

This document defines and makes reference to the procedures necessary for the control of nonconformances.

2.0 THEORY

Work that has failed inspections or tests or that in any way does not meet requirements are considered "nonconformances". Such work must be controlled to ensure it is not accidentally delivered or used. The Company's system ensures that nonconformances are identified when found and are segregated, investigated and dispositioned. Corrective and/or preventive actions are taken to ensure nonconformances do not reoccur.

3.0 GENERAL PROCEDURE

3.1 "Nonconformance" is any work or raw material used by the Company or listed as a Customer complaint, such as:

- Acceptable inspection limits
- Acceptable test results
- Customer requirements (prints, specs, etc.)
- Design requirements (prints, specs, etc.)
- Material shelf life limits
- Statutory or regulatory requirements (safety, packaging, etc.)

3.2 Nonconformances must be withheld pending disposition by a completed Request for Support (RFS) or by direction from Quality. A Calculated Risk Release may also be used for disposition; however, the Calc-Risk must be closed before Customer acceptance.

3.3 All employees are empowered to engage this procedure when they discover nonconformances. No employee may work on yellow-tagged nonconformances.

3.4 Upon discovery of a nonconformance, an employee may make an attempt to perform immediate rework if such rework is within that employee's ability. For example, if an item requires sanding and the nonconformance appears to be insufficient sanding, the employee may continue to sand the item to bring it into conformance without any further action.

3.5 When an employee cannot bring the work into conformance through immediate rework, the employee [redacted]

3.6 If an employee or supervisor cannot [redacted].

3.7 The employee completes the top portion of the Request for Support form, filling in all pertinent spaces. The employee then submits the Request for Support (RFS) to Quality.

[redacted]

3.8 The employee then tags the nonconforming work with a yellow nonconformance tag and indicates the report number on the tag. A yellow-tag may be used without a Request for Support for temporary identification. Whenever possible the work should be physically segregated from other work.

3.9 Upon receipt of the Request for Support, the Quality representative will [redacted]

3.10 Quality will then assign the Report to an appropriate authority for resolution. This includes [redacted].

3.11 If the nonconformance is ascertained or estimated to be the fault of a Supplier, Quality may elect to submit a Corrective Action Request (CAR) to the Supplier. In such cases, the CAR number is referenced on the Request for Support. For more on the CAR system see the Corrective and Preventive Action Procedure.

3.12 Quality will also indicate on the Request for Support form if a document supplement is required or if a configuration change is required, etc.

3.13 The RFS is submitted to the Material Review Board (MRB) for review and disposition. MRB actions that affect configuration may be immediately implemented when [redacted]

3.14 The MRB consists of the following personnel, at a minimum:

- [redacted]
- [redacted]
- [redacted]

3.14.1 MRB Qualification

A Material Review Board member must:

1) [redacted] or
2) [redacted]

3.15 In the event of a non-unanimous decision, the Senior Manager acts as a “referee” to resolve the MRB decision.

3.16 The Company provides timely reporting of delivered work that may affect safety. Notification includes [redacted]

4.0 DISPOSITIONS

4.1 Dispositions are classified as Major, Minor or None.

4.1.1 Major: This classification applies to [redacted]

4.1.2 Minor: This classification applies to [redacted]

4.1.3 None: This classification applies to [redacted]

4.2 MRB dispositions may include, but are not limited to:

4.2.1 Clarification

The MRB may determine that a Request for Support (RFS) was prepared because of ambiguity or misinterpretation of a requirement and as such may disposition the RFS as 'Clarification Only'. The condition must not be classified as [redacted]. The MRB records the correct interpretation of the requirement on the RFS form then checks Continuous Improvement Opportunity at the top of the form. Further disposition action is at the discretion of the MRB. This MRB disposition is not subject to [redacted]

4.2.2 Conditional Acceptance

Nonconforming supplies or work may be dispositioned 'conditional accept' if they do not adversely affect [redacted]. A 'conditional accept' disposition is a qualified acceptance of work classified as [redacted] This MRB disposition is subject to [redacted]

4.2.3 Non-Deliverable Work

Suspect work must be dispositioned 'Non-Deliverable' when their use could result in hazardous or unsafe conditions for individuals or their use could adversely a[redacted] This MRB disposition is not subject to [redacted].

4.2.4 Notification

It is possible that a Continuous Improvement Opportunity may not exist for all reported conditions. In this case the completed RFS becomes a record of evaluation for historical retention and notification to the reporting party. This MRB disposition is not subject to [redacted].

4.2.5 Precautionary

The MRB may determine that an RFS was prepared because of an undefined condition and as such may disposition the RFS as 'Precautionary Only'.

The condition is not be classified as [redacted]. The MRB evaluates the condition and indicates on the RFS the precautions to be taken, then checks Continuous Improvement Opportunity at the top of the form. Further action is at the discretion of the MRB. This MRB disposition is not subject to [redacted]

4.2.6 Repair (Non-Standard and Standard)

When an acceptable repair is possible, repair action may be authorized. The MRB completes the RFS and requests that repair instructions be prepared for their review. The MRB reviews the repair instructions and [redacted]. This MRB disposition is subject to [redacted].

4.2.7 Request for Waiver/Deviation

When work is considered 'fit-for-use' by the MRB but departs from specification requirements, a Request for Waiver or Request for Deviation may be submitted to the Customer for disposition. This MRB disposition is subject to [redacted].

4.2.8 Return to Supplier (Receiving Inspection)

When supplies deviate from requirements but are considered useable then receiving personnel prepares an RFS and forwards it to Quality for processing. This MRB disposition is subject to [redacted]. Supplies received that are obviously unfit for use may [redacted]

4.2.9 Rework (Non-Standard and Standard)

The MRB may disposition "Rework" according to a standard rework work instruction or a Customer approved non-standard procedure. After completion of a rework, the responsible personnel sign the RFS and forwards the material to re-inspection, accompanied with the RFS.

The re-inspection is performed as specified in the RFS or rework instruction and if found acceptable the "withhold" documentation is removed and "rework" acceptance or RFS number is recorded on related documents. This MRB disposition is subject to [redacted]

4.2.10 Scrap

Raw materials and work that is determined to be unfit for use are [redacted]

5.0 CUSTOMER DISPOSITION AUTHORITY

5.1 Major: A Waiver/Deviation disposition is [redacted].

5.2 RTV and Scrap dispositions are [redacted]

5.3 Minor: Conditional Accept and Non-Standard Rework/Repair dispositions are [redacted]

5.4 Scrap, RTV or Standard Rework dispositions are [redacted].

5.5 None: Not subject to Customer approval.

[redacted]

CORRECTIVE AND PREVENTIVE ACTION

Origination Date: XXXX

Document Identifier:	Corrective and Preventive Action
Date:	Latest Revision Date
Project:	Customer, Unique ID, Part Number
Document Status:	Draft, Redline, Released, Obsolete
Document Link:	Location on Server (if used)

Abstract:
This document describes the procedures used to correct and prevent nonconformities.

REVISION LOG

Issue	Date	Comment	Author
0-0			

DOCUMENT CHANGE RECORD

Issue	Item	Reason for Change

TABLE OF CONTENTS

1.0 PURPOSE

This document provides details and procedures for the process governing the discovery, reporting, resolution and recording of actions taken to correct or prevent nonconformities.

2.0 THEORY

Corrective action is taken to correct nonconformities, which could be work defects found during production, errors found in documents, equipment problems or problems related to how the Company performs functions in its processes. "Corrective action" is simply the "fix" that corrects the problem.

Whenever we take corrective action we also attempt to prevent the problem from recurring, which is known as "preventive action". There are times when preventive action is a standalone activity, specifically when reporting a problem that does not exist at the moment but could exist if something isn't done.

Having a formal system to record and resolve both existing and potential problems ensures that these problems do not occur or reoccur, thereby improving our work, processes and work environment.

3.0 PROCEDURE: INTERNAL REPORTS

3.1 The Company utilizes a Request for Support (RFS) form to record both nonconformances related to its work, processes and quality system as well as compliments or positive feedback. The form and system are used for both potential problems (corrective action) and possible problems (preventive action.) In all cases such problems or compliments may be reported internally, reported by Customers or other external parties. A Bulletin form should be used to clarify management instructions for activities that do not strictly fall within MRB or CCB disposition.

3.2 ALL employees are empowered with the ability to report sources of problems and nonconformances.

3.3 No disciplinary action may be attached to the submission of RFS's.

3.4 The Project Inspector has been assigned the role of RFS Administrator.

3.5 For the processing and routing of RFS's see Process Map.

3.6 If the responsible manager determines they are not responsible for the issue involved, they must return the RFS to the RFS Administrator for re-routing.

3.7 Actions taken are to the degree appropriate to the problem, as deemed by management.

3.8 The Project Inspector monitors the RFS Log to determine overdue RFS's and takes appropriate action to see that such RFS's are resolved.

3.9 In addition to corrective action efforts, management utilizes [redacted]

3.10 The management review process ensures [redacted]

3.11 Where work is suspected of a nonconformance, the Company takes preventive action that includes notification [redacted]

4.0 PROCEDURE: CORRECTIVE ACTION REQUEST (CAR)

4.1 Any purchasing agent may submit a Corrective Action Request (CAR) to a Supplier that has shown [redacted]

4.2 CAR's are processed through the same steps as the RFS but are routed to the Supplier for root cause analysis and action planning. CAR's are logged separately.

4.3 Failure of a Supplier to respond to a CAR or to respond with an insufficient action plan may mean [redacted]

DOCUMENT CHANGE RECORD

Issue	Item	Reason for Change

TABLE OF CONTENTS

1.0 PURPOSE

This procedure defines the requirements for the control of documents within the quality program. The scope of this procedure is to control documents specifically defined in section 3.0. The Document Control Center ensures that documents are controlled so that information on them is accessible, legible and suitably maintained and obsolete documents are stamped “Superseded”.

The following documents are not subject to this procedure:

- [redacted]
- [redacted]
- [redacted]
- [redacted]
- [redacted]
- [redacted]

2.0 THEORY

Documents must be controlled so that only reviewed and approved information is released and used by employees. This ensures that no mistakes are made due to the usage of obsolete information.

3.0 DOCUMENT TYPES

3.1. Quality Program: this document provides the primary Governing Policies. It also defines top-level requirements for the quality program and defines how the Company meets the requirements of Colorado Resolution 35 for non-residential structures.

3.2. QMS Procedures: these documents provide additional detail for certain procedures where such detail is required. The Quality Program includes references in bold-italic font to the applicable QMS procedures.

3.3. General Work Instructions: these documents provide machine-level or task-level details on what is required to perform specific work. These are typically specific to a department or work step. These do not include job-specific work instructions that are made part of the engineering documents and controlled via other procedures (see 1.0 above.)

3.4. Inspection Instructions: these documents are developed by or under the supervision of the Project Inspector using requirements from the applicable engineering drawings and/or technical documentation.

3.5. Forms: these documents are produced by a streamlined creation and control process.
Any department manager or area supervisor may develop a new form for use in their area.

3.6. Records that are created for temporary retention of miscellaneous information are not required to be maintained or controlled, such as personal notes written on a scratch pad, post-it note or form identified with a watermark or the term “Note Pad”.

[redacted]

4.0 QUALITY PROGRAM

4.1. Creating the Quality Program

The Quality Program has been developed by top management of the Company.

4.2. Review and Approval

The Quality Program is reviewed and approved by top management [redacted]

4.3. Distribution

The Quality program is distributed electronically through the Company's internet server.

The Document Control Center may retain older hardcopies or softcopies for [redacted]

In some cases, a hardcopy of the Quality Program may be given to an employee, department or Customer. If the document is needed for more than thirty (30) days it is [redacted]

4.4. Change Control

Any employee may request a change to the Quality Program. Requests for changes may be made by filing a Request for Change or an Engineering Order (EO) form and submitting it to top management or to the Project Inspector who will forward it to top management. All changes to the Quality Program go through [redacted]

5.0 QUALITY PROGRAM PROCEDURES (QMS)

5.1. Creating New QMS Procedures

QMS procedures should be created as [redacted]

5.2. Review and Approval

QMS Procedures are reviewed and approved by top management. At least one member of top management that is responsible for reviewing the document should be responsible for the area affected by the document. Approval is indicated by [redacted]

5.3. Distribution

QMS procedures are distributed electronically through the Company's internet server and/or via the intranet. The Document Control Center may retain older hardcopies or softcopies for [redacted]

5.4. Change Control

Changes to QMS procedures are performed in the same manner as the Quality Program.

6.0 GENERAL WORK INSTRUCTIONS

6.1. Creating New Work Instructions

Where necessary, work affecting quality is described by clear and complete documented work instructions that define what is required to perform specific work functions. Typically, new work instructions are developed by or under the supervision of an area manager or subject matter expert. Work instructions should be created as [redacted]

NOTE REGARDING JOB SPECIFIC WORK INSTRUCTIONS:

Engineering may develop work instructions that are specific to a given job, which are released and controlled as part of the technical documentation. Their format may be different from general work instructions.

6.2. Review and Approval

Work instructions must be reviewed and approved by the CCB. At least one member of the CCB responsible for reviewing the document should be responsible for the area affected by the document. Approval is indicated by [redacted]

6.3. Distribution

General work instructions are distributed electronically through the Company's internet server and/or via the intranet. The Document Control Center may retain older hardcopies or softcopies for [redacted]

6.4. Change Control

Changes to general work instructions are performed in the same manner as the Quality Program. When general work instructions are changed, [redacted]

7.0 INSPECTION INSTRUCTIONS

7.1. Creating New Inspection Instructions

New inspection instructions are developed by or under the supervision of the Project Inspector using requirements from the applicable engineering drawings and/or technical documentation. Inspection instructions should be created as [redacted]

NOTE REGARDING JOB SPECIFIC INSPECTION INSTRUCTIONS:

Engineering may develop inspection instructions that are specific to a given job, which are released and controlled as part of the technical documentation and subject to the controls of the Configuration Management Procedure - not this procedure. Their format may be different from general work instructions.

7.2. Review and Approval

Approval is indicated by [redacted]

7.3. Distribution

Inspection instructions are distributed electronically through the Company's internet server and/or intranet. The Document Control Center may retain older hardcopies or softcopies for [redacted]

7.4. Change Control

Any employee may request a change to inspection instructions by completing a Request for Change form and submitting it to the Project Inspector. All changes to inspection instructions go through the same review and approval as the original release. When changes are approved the revision indicator is [redacted].

8.0 FORMS

8.1. Creating New Forms

Forms undergo a streamlined creation and control process. Any department manager or area supervisor may develop a new form for use in their area. The form should be created in software format (MS word, Excel, etc) and then submitted to the appropriate department manager for review and approval. Forms are a special kind of document that may be photocopied as needed; furthermore, forms do not require an approval signature. Department managers are responsible for creating and using forms in their areas.

8.2. Review and Approval

Forms may be reviewed and approved by the manager of the department or area primarily affected by the form. Forms do not require a signature approval; instead, the manager approving the form shall [redacted]

8.3. Distribution

Forms are made available through the Company's internet server, intranet or Document Control Center. These may be printed and photocopied as needed. When hardcopies run out, a new copy is to be printed for photocopying. Photocopying from a previously photocopied form is [redacted].

8.4. Change Control

Any employee may submit a request for change to the appropriate area manager responsible for the form and the manager will determine if the form should be revised. Revised forms go through the same review and

approval as originals but must [redacted]

9.0 EXTERNAL DOCUMENTS

9.1. Some external (third party) standards or specifications may be maintained on file without control provided that the revision indicator is evident somewhere in the document. This is necessary because [redacted] Unless otherwise specified, if the revision level is not shown on documents, then [redacted]

9.2. Third party specifications and engineering drawings, including those of the Customer are controlled. Where control of an external document is deemed necessary, they shall be made available by the Document Control Center, which shall [redacted].

10.0 PERIODIC RE-EVALUATION OF DOCUMENTS

The entire set of quality documentation is subject to continuous improvement. Change control documents are [redacted]

[redacted]

PRODUCTION PROCEDURE

Origination Date: XXXX

Document Identifier:	Production Procedure
Date:	Latest Revision Date
Project:	Client, Unique ID, Part Number
Document Status:	Draft, Redline, Released, Obsolete
Document Link:	Location on Server (if used)

Abstract:
This document describes the production process.

REVISION LOG

Issue	Date	Comment	Author
Orig			

DOCUMENT CHANGE RECORD

Issue	Item	Reason for Change

[redacted]

TABLE OF CONTENTS

1.0 PURPOSE

This document defines the overall Production process and includes or makes reference to the procedures necessary for the process. The Production process includes all required inspections and tests.

2.0 THEORY

Production operations or tasks are conducted under controlled conditions to ensure Production quality. By this we mean:

- Ensuring Operators have a good work environment and training
- Ensuring Operators have good equipment and tools
- Properly handling and preserving raw materials
- Supplying adequate work instructions, drawings, etc., where needed

3.0 PROBLEM RESOLUTION

All employees are instructed to immediately notify a Responsible Authority (RA) whenever a process or Production related problem occurs that cannot be corrected according to established process controls and could affect or actually affects the quality of the Production.

It is understood that the appropriate responsible authority will occasionally not be available for support; in that event, contact each of the following personnel in the order listed until an appropriate authority can make a decision to resolve the problem. No disciplinary action may be attached to an employee's attempt to resolve a problem.

For instance (replace with your responsible authority):

- [redacted]
- [redacted]
- [redacted]
- [redacted]
- [redacted]
- [redacted]t
- [redacted]
- [redacted]
- [redacted]

4.0 DOCUMENTATION

4.1 All revision controlled documents are available at the point of use.

4.2 In addition to this procedure, additional documentation may be required according to [redacted]

4.3 Such documentation includes the document number and revision and [redacted]

4.4 Records that are created for temporary retention of miscellaneous information are not required to be maintained or controlled, such as [redacted]

5.0 IDENTIFICATION

5.1 Production materials/work-zones are identified by any of the following methods:

- [redacted]
- [redacted]

5.2 Lot traceability of materials is maintained on the appropriate paperwork when required. Supervisory staff reviews order documentation to determine the requirements for serialization and [redacted]

5.3 Nonconforming Production that has failed an inspection or test and cannot be reworked to comply with requirements is [redacted]
See ***Control of Nonconformances Procedure***.

5.4 Any materials or Production not marked with a tag are considered [redacted]

5.5 Identification of Transfer Chemical Containers

5.5.1 Whenever a portion of chemical is transferred from its original container to a smaller temporary container, the [redacted]

5.5.2 Whenever a portion of chemical is transferred from its original container to a smaller permanent container, the [redacted]

6.0 MATERIAL HANDLING

6.1 Work instructions and/or training instructs Operators on the proper and safe handling of materials.

6.2 In all cases, Operators handle materials [redacted]

6.3 The Company provides suitable safety and personal protection equipment for handling hazardous or toxic materials. Operators are required to wear or use such equipment as directed by their supervisors, managers and training.

7.0 PRESERVATION

7.1 Operators employ [redacted]

7.2 Operators employ [redacted]

7.3 Operators employ [redacted].

7.4 Operators employ [redacted]

7.5 Work instructions and training methods ensure [redacted]

7.6 Work instructions and training methods ensure [redacted].

7.7 Work instructions and training methods ensure [redacted] ls.

8.0 CLIENT AND GOVERNMENT PROPERTY CONTROL

8.1 Client and Government Property (C&G Property) means all hardware property owned by or leased to the Client and Government or acquired by the Client and Government under the terms of a contract, which includes:

- [redacted]
- [redacted]
- [redacted]

8.2 All Client and Government furnished property is inspected upon receipt according to the ***Receiving Procedure***. Any nonconformities or shortages are communicated to the Client for action.

8.3 C&G Property is identified [redacted] with [redacted]

8.4 Sensitive material as defined by the Client or Government is [redacted]

8.5 C&G Property is only used as instructed or required by the Client or Government contract and is not [redacted]

8.6 C&G provided equipment is subject to [redacted]

8.7 The Company investigates and reports to the Client or Government any cases of [redacted]

8.8 Requirements for the control of C&G property is [redacted]

9.0 SHELF LIFE EXTENSION

9.1 Items that are subject to expiration may be repeatedly extended up to the limit of their original expiration according to [redacted] or by verification of performance under Production conditions; for instance:

[redacted].

9.2 Chemicals that are purchased or prepared by the laboratory are [redacted]

9.3 Raw material components whose shelf life has been extended displays the [redacted]

0-0			

DOCUMENT CHANGE RECORD

Issue	Item	Reason for Change

TABLE OF CONTENTS

1.0 PURPOSE

This document defines the Receiving process including receiving inspection activities and includes or makes reference to procedures for the various activities within the process.

2.0 THEORY

Receiving is the first line of defense to prevent sub-standard supplies from affecting the Company's process or product quality; however, sampling and 100% incoming inspection is only a part of the collection of applications that are necessary to assure the release of conforming supplies to stock. Receiving inspection cannot provide 100% assurance of product or process quality because the affect that the supplies have on production-level activities cannot be assessed or verified - only by 100% use of supplies will defects be detected in product or process quality.

As a result of teaming and intelligent design, the Company ensures that deliverable supplies meet Customer requirements prior to packaging and shipping.

4.0 PROCEDURE: RECEIVING INSPECTION

4.1 The inspector will receive the items and original paperwork from the RA and acquire the applicable PO. (see the Purchasing Procedure)

4.2 Inspections are performed according to Appendix A or as required by work instruction, Customer requirements or other documentation. The results are recorded on the applicable forms and the purchase order is processed according to Appendix B.

TABLE OF CONTENTS

1.0 PURPOSE

This procedure defines the requirements for the control of records within the quality program. The scope of this procedure is to control only the records referenced in this document; other records are not controlled.

2.0 THEORY

A record is any written or electronic piece of evidence that may be needed later to provide evidence of conformity to requirements. Typically a blank "form" becomes a "record" when it is completed. Records must be controlled so that the information on them is accessible, legible and suitably maintained.

3.0 RULES FOR CONTROL OF RECORDS

3.1 The controls for each type of record are defined in ***Appendix A*** of this procedure.

3.2 The listed "controller" must [redacted]

3.3 Records for active contracts are maintained in the quality department handling the operations. Records [redacted]

3.4 The Document Control Center maintains archive files for records. Records shall be maintained a minimum of [redacted]

3.5 Records that are discarded after retention shall [redacted]

3.6 Hardcopy records are to be [redacted]

3.7 Records are available for review by the Customer and copies of non-proprietary records are furnished to the Customer upon request. Non-disclosure agreements are required for non-Governmental entities.

3.8 Records are verified for [redacted].

3.9 The Company does not require vendors to maintain records for the Company; instead, [redacted]

3.10 To ensure protection of records, electronic records are subject to [redacted]

3.11 Local computer data that is stored on company computers must [redacted]

3.12 When making corrections to written record entries, the error is [redacted]

3.13 Correction fluid or correction tape is [redacted]

TABLE OF CONTENTS

1.0 PURPOSE

This document provides details on the Company's training program and requirements.

2.0 THEORY

Employees can only perform their duties adequately when properly trained. The Company intends to ensure adequate employee performance through a robust training program that includes initial orientation, assessment of abilities and on-the-job training to enhance those abilities.

3.0 TRAINING PROCEDURE

3.1 Hiring

Employees are hired on their basis to [redacted]

To accomplish this, potential candidates are [redacted]

3.2 Initial Indoctrination and Orientation

Once hired, new employees are [redacted]

3.3 On the Job Training

Once an employee has completed initial indoctrination they undergo on-the-job training relative to their position. This training is [redacted]

3.4 Additional Training

At the discretion of management, additional training may be conducted at any time.

This may be necessitated by [redacted]
